PROFESSIONAL SUMMARY

Software Engineering student at Universidad Manuela Beltrán, focused on building backend systems and end-to-end software solutions. I have developed applications with Java and Spring Boot, designing REST APIs and ACID-compliant persistence with MySQL, PostgreSQL and Supabase databases, as well as Android applications and small systems using AI models.

My project experience ranges from full-stack systems and mobile applications to Machine Learning and computer vision solutions with Python, YOLOv8 and OpenCV. I am particularly interested in modular, maintainable software design aimed at solving real-world problems, applying principles of architecture, data modeling and development best practices.

I am characterized by a continuous learning attitude and openness to feedback. I value listening to different perspectives, opinions and constructive criticism to identify opportunities for improvement, strengthen my skills and raise the quality of my work. I enjoy learning from other developers and sharing knowledge as part of my professional growth.

TECHNICAL SKILLS

Languages: Java, Kotlin, Python, JavaScript, GML

Backend: Spring Boot, Spring Web, JPA/Hibernate, REST APIs, Node.js (basic)

Mobile: Android, Jetpack Compose, Room, Retrofit, MVVM architecture

Databases: MySQL, PostgreSQL, Supabase, Firebase Firestore

Computer Vision & AI: YOLOv8, OpenCV, DeepSORT, Machine Learning, CUDA

Cloud & Tools: Google Cloud, Git, GitHub, Jira, Figma, Linux (intermediate), Gmail API, Telegram Bot API

Methodologies: Scrum, Design Thinking, Six Sigma (Yellow Belt)

PROJECTS

Slime Wars - 2D Local Multiplayer Game | 2023

Tecnologías: GameMaker Studio 2, GML, Game Development

- Developed a 2D local multiplayer combat game with movement, jumping, attacks, damage, health, collisions and win conditions.
- Implemented hitboxes, power-ups, player states, particle effects, audio and round restart.
- Organized the game logic into independent systems to ease maintenance and future development.

Outfitly - Telegram Outfit Assistant | 2025

Tecnologías: Python, Telegram Bot API, REST APIs, Weather API, Automation

- Developed a Telegram assistant that generates personalized outfit recommendations based on user preferences, colors, style and weather conditions.
- Integrated external services through REST APIs, including weather data to adapt recommendations to current conditions.
- Implemented preference management and independent sessions per user, separating bot logic, external queries and the recommendation system.

Home Management - Android Mobile App and Backend | 2025

Tecnologías: Kotlin, Jetpack Compose, Spring Boot, JPA/Hibernate, Supabase PostgreSQL, Room, Retrofit, MVVM

- Developed an Android mobile app to centralize household management: finances, shopping, tasks, meal planning, inventory, laundry, maintenance, repairs, calendar and reminders.
- Built the client with Kotlin, Jetpack Compose, Room, Retrofit and MVVM architecture, with local persistence and synchronization with remote services.

- Developed a backend with Spring Boot, Spring Web and JPA/Hibernate, integrated with Supabase PostgreSQL for persistence, authentication and file storage.
- Integrated notifications, cloud synchronization and monthly email reports through the Gmail API.

AgroGuardian - Cattle Detection and Tracking System | 2026

Tecnologías: Python, YOLOv8, OpenCV, DeepSORT, Computer Vision, Machine Learning, CUDA

- Developed a computer vision system for detecting, tracking and counting cattle in video using YOLOv8 and DeepSORT.
- Implemented independent modules for detection, tracking, counting, video processing, configuration and visualization.
- Trained and evaluated custom models using metrics such as precision, recall and mAP50, with CUDA-accelerated processing.
- Designed the processing pipeline from video input to results output, making the model easier to evaluate and reuse.

EXPERIENCE

Freelance Developer - Academic and Personal Projects | 2024 - Present

- Developed REST APIs with Spring Boot for data management and business logic.
- Designed authentication endpoints and CRUD operations.
- Implemented persistence with SQL databases (MySQL, PostgreSQL) and Firebase.
- Structured the backend architecture of personal projects with a modular, clean-code approach.

EDUCATION

B.S. in Software Engineering | Universidad Manuela Beltrán, Bogotá | 2023 - Present

UAS Pilot | Academia Aeronáutica de Colombia | January 2026 - June 2026

CERTIFICATIONS

- Google Cloud Computing Foundations Certificate (2026)
- Scrum Fundamentals Certified (2024)
- IBM Enterprise Design Thinking Practitioner (2025)
- IBM Enterprise Design Thinking - Team Essentials for AI (2025)
- Six Sigma Yellow Belt (2024)

LANGUAGES

Spanish: Native | English: Advanced (B2, First Certificate)

SOFT SKILLS

Effective communication, fast learning, adaptability, teamwork.
